FINDING A REGISTERED PROFESSIONAL ENGINEER OR ENGINEERING GEOLOGIST

Astoria Development Code (ADC) § 3.310 requires engineered grading and/or sedimentation and erosion control plans in some situations; the engineered plans can be stamped by a Registered Professional Engineer (PE) or Registered Engineering Geologist (CEG). ADC § 3.315 states an engineering geology report is required when the slope of cut or fill surfaces exceeds 2:1 (two horizontal to one vertical) or if cuts remove the toe of any slope where a known potential or historic landslide exists; any structural fill shall also be designed by a PE. ADC § 3.325 states projects ≥ 40,000 sq. ft. shall install a stormwater management system designed by a PE and/or Registered Landscape Architect. ADC Article 2 includes zones that require a site investigation report prepared by a Registered Geologist (RG) when development is within 100 ft. of a landslide zone.

The City of Astoria is unable to make recommendations of professionals for your project; however, we are commonly asked for a list of engineering professionals in our region and have included these below.

Public Works submittal requirements, references and application forms may be found on the City of Astoria website at https://www.astoria.or.us/City_of_Astoria_Forms.aspx#PublicWorksFP.
